Location
Rawalpindi, Pakistan

TECHNICAL SKILLS

Programming: Python, SQL, C++.

AI/ML: Machine Learning, Deep Learning, Model Evaluation.

Computer Vision: YOLOv8, OpenCV, CNNs, Image Processing.

NLP and GenAI: NLP, RAG, LLMs, Prompt Engineering.

Frameworks: TensorFlow, Scikit-learn, Flask, Streamlit.

RAG Tools: FAISS, Hugging Face, LangChain, Groq.

Data Science: NumPy, Pandas, Matplotlib, Seaborn.

Tools: Git, GitHub, Jupyter Notebook, Google Colab , Kaggle

LANGUAGES

English (Intermediate)
Urdu (Fluent)

EDUCATION

BS Computer Engineering
IIUI, Islamabad
2022 – 2026
CGPA: 3.79 / 4.00

CERTIFICATIONS

✔ The Bits and Bytes of Computer Networking – Google
✔ Arduino Interfacing Workshop
✔ Raspberry Pi Workshop
✔ NVIDIA Jetson Nano Workshop

Professional Summary

Computer Engineering graduate with knowledge of Python, machine learning, deep learning, and computer vision. Familiar with model development, NLP, RAG chatbots, FAISS, Hugging Face, and LLM integration. Experienced in AI-related internship and academic projects, with a strong interest in building practical AI solutions.

WORK EXPERIENCE

AI Intern · Sybrid Pvt. Ltd. **(A Lakson Group Company)**

July 2025 – Sep 2025

- Developed a RAG-based chatbot for agriculture using LLMs and NLP pipelines on urdu dataset.
- Built data ingestion and knowledge base workflows .
- Developed REST APIs using Flask for chatbot deployment .
- Improved model performance and response accuracy.

SOC Analyst Intern · LMKR

July 2024 – Sep 2024

- Deployed ELK Stack and Elastiflow using Docker on Ubuntu.
- Performed penetration testing based on OWASP Top 10.
- Used Nmap, Burp Suite, Netcat, and Maltego for security analysis.
- Monitored real-time network traffic and logs.

KEY PROJECTS

AI Chat-Driven Object Detection Assistant *2025*

- Developed a computer vision application for detecting and analyzing objects in video.
- Integrated natural-language interaction for querying detection results.
- Built an application interface for visualizing results and interacting with the system.

Corvit AI Chatbot *2026*

- Built AI-powered chatbot with RAG for Corvit course and career guidance.
- Integrated natural language queries with knowledge base and online search.
- Developed responsive web portal using HTML, CSS, JS and Tailwind CSS.

Solar Panel Defect Detection and Severity Estimation *2026*

- Applied transfer learning to classify solar panel defects using the ELPV dataset.
- Developed a defect severity estimation approach using fuzzy logic.
- Evaluated model performance on test data.

Skin Lesion Classification *2026*

- Developed a skin-lesion image classification model using transfer learning.
- Trained and evaluated a ResNet50 model on the HAM10000 dataset.
- Reported approximately 90.49% accuracy in project evaluation.

AI-Powered IoT Network Anomaly Detection Platform *2026*

- Developed a machine learning platform to detect network anomalies using the CICIoT2023 dataset covering 33 attack types..
- Implemented Isolation Forest, Deep Autoencoder, Random Forest, and XGBoost for anomaly detection and attack classification.
- Achieved 99.53% accuracy with Random Forest and built a Streamlit dashboard with SQLite-based evidence storage.

Customer Assistant Robotic Cart *2025-2026*

- Developed an IoT-based smart shopping trolley to assist customers with cart movement and automated billing.
- Integrated sensors, motor control, and weight measurement for customer following, obstacle avoidance, and item-weight tracking.
- Contributed to hardware integration, project documentation, and coordination between system components.

ACHIEVEMENTS & AWARDS

Star of IIUI – Awarded for achieving the highest GPA in the class, International Islamic University Islamabad (Nov 2023)
