Rawalpindi, Pakistan

TECHNICAL SKILLS

Networking: TCP/IP, OSI Model, IPv4/IPv6, Subnetting, VLANs, Routing and Switching

Tools: Cisco Packet Tracer, GNS3, ELK Stack, Elastiflow

Network Security: Nmap, Burp Suite, Network Traffic Analysis

Operating Systems: Linux (Ubuntu), Windows

Programming: Python, C/C++, SQL

Other Tools: Docker, Git, GitHub

LANGUAGES

English (Intermediate)
Urdu (Fluent)

EDUCATION

BS Computer Engineering
IIUI, Islamabad
2022 – 2026
CGPA: 3.79 / 4.00

CERTIFICATIONS

✔ The Bits and Bytes of Computer Networking – Google
✔ Arduino Interfacing Workshop
✔ Raspberry Pi Workshop
✔ NVIDIA Jetson Nano Workshop

Professional Summary

Computer Engineering graduate with foundational knowledge of computer networks, TCP/IP, Linux, and network security. Familiar with network monitoring tools such as ELK Stack and Elastiflow, along with Docker, Ubuntu, and Nmap. Interested in network administration, troubleshooting, and infrastructure support.

WORK EXPERIENCE

AI Intern · Sybrid Pvt. Ltd. **(A Lakson Group Company)**

July 2025 – Sep 2025

- Developed a RAG-based chatbot for agriculture using LLMs and NLP pipelines on urdu dataset.
- Built data ingestion and knowledge base workflows .
- Developed REST APIs using Flask for chatbot deployment .
- Improved model performance and response accuracy.

SOC Analyst Intern · LMKR

July 2024 – Sep 2024

- Deployed ELK Stack and Elastiflow using Docker on Ubuntu.
- Performed penetration testing based on OWASP Top 10.
- Used Nmap, Burp Suite, Netcat, and Maltego for security analysis.
- Monitored real-time network traffic and logs.

KEY PROJECTS

Multi-Branch Network Infrastructure *2024*

- Designed a multi-branch network in Cisco Packet Tracer, implementing VLAN segmentation, DHCP, DNS, and RIP routing for inter-network connectivity.
- Configured VLANs, inter-VLAN routing, RIP, DHCP, DNS, and wireless LAN connectivity.
- Implemented IP subnetting and static/dynamic addressing, and verified connectivity using ping tests.

Multi-Threaded TCP Chat Server *2025*

- Developed a TCP client-server chat application supporting multiple concurrent clients.
- Used socket programming and POSIX threads (pthreads) for real-time communication between clients.

AI-Powered IoT Network Anomaly Detection Platform *2026*

- Developed an anomaly detection platform using CICIoT2023, covering 33 attack types.
- Implemented Isolation Forest, Deep Autoencoder, Random Forest and XGBoost.
- Achieved 99.53% accuracy with Random Forest and built a Streamlit dashboard with SQLite evidence storage.

Policy-Based Routing with Route Maps and ACLs *2024*

- Implemented policy-based routing using route maps and access control lists to direct traffic according to defined policies.
- Configured routing rules based on traffic sources and specified conditions.

Network Redundancy, Security & Monitoring *2024*

- Configured VRRP and GLBP to provide gateway redundancy, improve network availability, and support traffic load balancing.
- Implemented DHCP Snooping and Private VLANs to mitigate rogue DHCP server attacks and enhance Layer 2 network isolation.
- Configured SNMPv3 for secure network monitoring and device management.

Customer Assistant Robotic Cart *2025-2026*

- Developed an IoT-based smart shopping trolley to assist customers with cart movement and automated billing.
- Integrated sensors, motor control, and weight measurement for customer following, obstacle avoidance, and item-weight tracking.
- Contributed to hardware integration, project documentation, and coordination between system components.

ACHIEVEMENTS & AWARDS

Star of IIUI – Awarded for achieving the highest GPA in the class, International Islamic University Islamabad (Nov 2023)
